

SIM CARD READER INSTALLATION INSTRUCTIONS

IMPORTANT! – PLEASE FOLLOW THESE INSTRUCTIONS CAREFULLY TO GET THE SIM CARD READER WORKING CORRECTLY

IMPORTANT! - Do not plug SIM reader into PC until the drivers have been installed

WARNING! – There are two programs on the CD, SIM SCAN and SIM Manager. SIM SCAN should not be used as there is a risk of sim cards being damaged. SIM SCAN is intended to be used to clone sim cards i.e. copy the identity from one sim card onto another sim card. This requires a separate multi-identity SIM card. We do not supply these sim cards and we do not endorse this feature. This is to be used at your own risk. This SIM card reader is sold for the purpose of editing, copying and backing up SIM card address book data only. All other use is unsupported.

INSTALLATION PROCEDURE

1. Insert the Driver CD ROM from the package
2. On the CD, locate the folder \USB SETUP
3. In that folder locate the file “USB Driver .exe” and double click to install the USB Driver
4. Reboot the PC
5. Insert your SIM card into the SIM Reader and plug the SIM Reader into a free USB port. Do not connect it via a USB hub or USB extension cable. Do not use the front or side USB ports on a desktop PC. We recommend the SIM Reader be connected to a rear USB port.
6. A dialog box will come up asking to search for drivers on Windows Update. Select “No, not this time”
7. On the next page select “install the software automatically (recommended)” and click Next. The software should then install and the device should be recognised by the PC.
8. You now have 2 options – A OR B below. The Sim Reader software on the CD will only work if the Regional Settings on your PC are set to USA. Alternatively you can download an alternative SIM Reader package from our download area that will work if your Regional Settings are set to UK or any other setting. We recommend you choose option B below.

NOTE: IF THE CD IS FAULTY OR CANNOT BE READ IN YOUR CD-ROM DRIVE, THE DRIVER CAN BE DOWNLOADED FROM OUR DOWNLOAD AREA - [HTTP://WWW.DRIVERHUB.NET/PUBLIC/DRIVERS](http://www.driverhub.net/public/drivers)

OPTION A – USE THE SOFTWARE FROM THE CD

1. On the CD, locate the folder \SIM SETUP
2. Locate the file “SETUP.EXE” and double click on it to run the installer. Follow the prompts to install the software
3. Once the software is installed, it will not work unless you change your Regional Settings to English (USA). This can easily be changed back and only needs to be selected temporarily while you are using the SIM Reader software.
4. To change regional settings to USA go to Start Menu > Control Panel and choose “Regional and Language Options”
5. Select English (United States) from the dropdown and select OK. Your PC will now be set to USA regional settings e.g. clock will be set to AM/PM instead of 24h clock.
6. On the start menu there will be a new program installed called CALLEX. Click on this and select the button at top left “Manage Of Sim Card” The sim card management software will run and you can now edit your sim card data
7. When finished with the sim software, change your regional settings back to English (United Kingdom) or whatever your previous setting was (follow steps 3, 4, 5 above again). NOTE: This SIM software will not work unless your PC is set to English (United States).

OPTION B – DOWNLOAD LATEST SIM MANAGER SOFTWARE

1. Download the software here: <http://www.driverhub.net/public/drivers/multisim515.zip>
2. Save the file to your PC and extract the file.
3. Open the folder “GSM SIM UTILITY 5.15” and double click on the setup.exe
4. Follow the prompts to install the software
5. Ensure sim card reader is plugged in with your sim card inserted correctly into the socket. The metal contacts on the sim must be touching the metal contacts inside the sim reader.
6. On your start menu, locate the new program “SIM EDITOR”. Click on this to run the sim card phone book editing software. There is no need to change regional settings to use this program.
